

RAPID Rig Assessment Tool

In a World Full of Unknowns, Why Not Know for Sure?

Parker Wellbore RAPID software contains equipment specific content and assessment points for over 90% of the rig equipment in global operation today.

Risk Mitigation

Improper assessment and calculation of rig startup costs lead to significant unplanned expense.

Cost Effective

Thorough and complete assessments accurately evaluate your equipment on overall condition, against current industry standards, best practices and HSE requirements.

Optimization

The RAPID system is specifically designed to optimize the performance of drilling operations by ensuring the equipment and assets are evaluated correctly efficiently.

Standardization

This comprehensive program provides a standardized approach to rig assessments across a global landscape and supports efficient and effective evaluation of a rig's assets with a standardized report.

What RAPID Can Do to Save You Money and Time in Your Drilling Operation.

Unparalleled Drilling Contractor Experience

No other rig assessment tool combines the level of personnel and equipment experience, backed by industry standards.

Multiple Assessors at the Site

The RAPID software is designed to operate efficiently with several assessors on site, while automatically synching assessment details. The increased capabilities of RAPID and several assessors on site substantially reduces the man-hours required to carry out an assessment.

Daily Reports with Accountability Function

The RAPID program dynamically populates daily reports requiring a signature acknowledgment for any at risk items which could pose a potential risk to equipment, personnel or the environment. As an extended function of the reporting processes, the program populates a disposition list detailing any issues for the rig and equipment and can be used as a corrective actions list.

Data Storage

Rig data and assessment reports are maintained for historical record, from startup to stacked rigs. The final report of archived information is stored for faster reactivation and start-up, minimizing risk and cost.

Rig Assessment Performance Database

Developed and implemented with the guidance of Subject Matter Experts, RAPID brings together Parker Wellbore's Operational & Maintenance Excellence Programs.

Applications

- Rig Start Up
- Rig Stack Out (Preservation Maintenance)
- Dry Lease (Operational Readiness)
- Current Operations (Operations and Maintenance Assessment).

Benefits

- Streamline the Rig Start-Up Process
- Provide Visibility to Your Equipment's Operational Status
- Document, Report and Catalogue Equipment Condition
- Reduce Unplanned Expense
- Mitigate Risk

Parker Wellbore's RAPID software contains equipment specific content and assessment points for over 90% of the rig equipment in global operation today.
